

Bead Stars

Easy Step-by-Step Craft Idea

What you need:

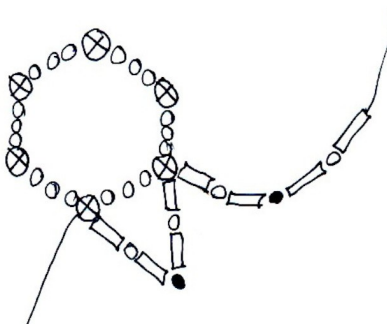

Beads and/or tube beads

**Approximately 600mm of
0.5mm thick wire per star**

Rainy Day Crafts

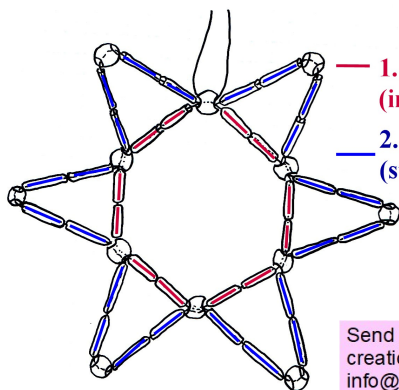

Start by threading the beads for the inner circle onto the wire. For this star, you will need 6 larger beads and 18 smaller beads. Thread them in the following order: one large bead, three small beads, one large bead, three small beads, and so on until all the beads are threaded. Thread the wire through the first large bead to form a circle. Leave a length of wire at the starting end, as you will need it to finish the star.

Thread two tube beads, one round bead and another two tube beads onto the wire. Then pass the wire through the next large bead in the inner circle.

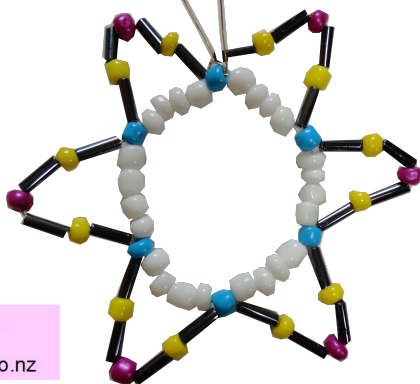

Repeat the same pattern for each point, working your way around the circle until all six points are complete.

You will now have two wire ends. Use them to hang your star, or thread additional beads onto the ends to decorate it further.

— 1. row of beads
(inner circle)

— 2. row of beads
(star pointers)
